Downy Woodpecker

The Downy Woodpecker is found in woodlots, orchards and forests almost throughout the United States and Canada and is our smallest woodpecker. It is distinguished by its small size (approx. 7 inches), white back and red patch on the head. The carving is mounted on a wooden tree stump. The carving has an overall height of 8 1/2 inches.

All of our life-size birds are hand-carved from basswood (a very carveable wood that does not split and takes paint well), hand-feathered to show detail and painted with acrylic paint. The eyes are glass, feet are metal and base is wood.

I am happy with the bird. I received it in excellent condition and the coloring and details of the bird were realistic.
