Tree Swallow

The Tree Swallow has the ability to adapt to almost any environment including open fields, marshes or towns causing it to have a widespread population throughout North America. It has dark iridescent greenish-blue upperparts, white underparts and a notched tail. All of our life-size birds are hand-carved from basswood (a very carveable wood that does not split and takes paint well), hand-feathered to show detail and painted with acrylic paint. The eyes are glass, feet are metal and base is wood. The tree swallow measures 6 inches from beak to tail, 3.5 inches from head to foot and has an overall height of 6.5 inches.

Each spring I look forward to the arrival of our tree swallows. This carving is a fantastic replica of one.
